Can you use a 20v battery on a 60V tool?

R: The short answer is no, you cannot use a 20V battery on a 60V tool. The voltage of the battery must match the voltage of the tool for them to be compatible and work together effectively. Using a lower voltage battery, such as a 20V battery, with a higher voltage tool like a 60V tool, won't provide enough power for the tool to function properly.
