What are amorphous silicon solar panels?

Amorphous silicon solar cells (or a-Si) are one such technology that's capturing industry attention. In this article, we'll take a deep dive into the world of amorphous silicon solar panels, examining their composition, functionality, as well as the pros and cons they bring to the table.

Are amorphous solar panels the cheapest?

Amorphous solar panels are the cheapest per watt (\$/watt). Amorphous solar cells are more widely used in low-power electronics than solar panels. Amorphous solar panels aren't for everyone: they are much less efficient than traditional solar panels. To compare quotes with different types of solar equipment, check out the EnergySage Marketplace.

Are amorphous solar panels a viable option?

If you're looking into DIY solar or small-scale solar, amorphous solar may be a viable option for you. However, amorphous solar panels are still limited in their availability and may be difficult to find. If you'd like to learn where you might find thin-film or amorphous solar panels, contact a solar installation company near you.

What is an amorphous solar panel?

An amorphous solar panel operates on the same principle as a regular panel, using Si-based photovoltaic technology. However, instead of using individual cells made from Si wafers, it employs a thin layer of non-crystalline silicon that is applied to a substrate such as metal, glass, or plastic.

Do amorphous solar panels produce electricity?

In other words, your amorphous solar panels only produce electricity at around a third of the rate of a standard panel. Even with further investment, experts believe the theoretical efficiency limit of amorphous solar is 15%, still below the average solar panel.

Are amorphous solar panels more efficient than traditional solar panels?

Amorphous solar panels are significantly less efficient than traditional solar panels. Most amorphous solar panels are only about 7 percent efficient, whereas monocrystalline and polycrystalline panels can exceed 20 percent efficiency. This means you'll need much more roof space to get the same output as traditional solar panels.
