Is battery storage the future of energy?

In the brave new energy world of the not-so-distant future, battery storage is thought to make possible boundless clean energy and convenient technologies like fully electric vehicles and multiple hand-held devices, even though batteries are not particularly cost-effective relative to larger storage methods such as pumped hydro or compressed air.

Will energy storage continue through 2025?

And you can expect both trends to continue through 2025. ACP and Wood Mackenzie's latest Energy Storage Monitor highlights rapid growth in Texas and California, where grid operators ERCOT and CAISO have been particularly eager to embrace storage as a solution to constraints and resiliency concerns.

Which states have more battery storage?

Only California brought gigawatt hours online, 6 GWh, thanks to the state's focus on longer-duration storage. Arizona, Colorado, Florida, and Vermont also added storage last quarter, hinting at a much larger appetite for grid-scale battery deployment nationwide.

Are lithium-ion batteries a viable storage solution?

Plenty of lithium-ion alternatives are being actively piloted for their viability, technologies ranging from Natron's sodium-ion battery to EnerVenue's metal-hydrogen vessel; from gravity storage to IceBricks, it seems like there's a storage solution for any situation.

Why is energy storage important?

ACP adds that increased energy storage deployment not only enhances reliability and affordability but also drives U.S. economic expansion, supporting growing industries like manufacturing and data centers. "Energy storage is crucial for energy security and to help outpace rising demand," chimed Noah Roberts, ACP's VP of energy storage.

Are lithium-ion batteries still economical?

Lithium-ion batteries are still the most economical solution for most situations, even without considering their trend downward pricing trend, but it takes a village, as they say- and ours should be doing all it can to ensure storage stays an economical solution for the foreseeable future.
