

## **Base Station Energy Transformation Plan**

What are the basic parameters of a base station?

The fundamental parameters of the base stations are listed in Table 1. The energy storage battery for each base station has a rated capacity of 18 kWh, a maximum charge/discharge power of 3 kW, a SOC range from 10% to 90%, and an efficiency of 0.85.

Do 5G communication base stations have multi-objective cooperative optimization?

This paper develops a method to consider the multi-objective cooperative optimization operation of 5G communication base stations and Active Distribution Network (ADN) and constructs a description model for the operational flexibility of 5G communication base stations.

What are the operational constraints of 5G communication base stations?

The operational constraints of 5G communication base stations studied in this paper mainly include the energy consumption characteristics of the base stations themselves, the communication characteristics, and the operational constraints of their internal energy storage batteries.

What is the energy storage battery capacity of a 5G base station?

The energy storage battery for each base station has a rated capacity of 18 kWh,a maximum charge/discharge power of 3 kW,a SOC range from 10% to 90%,and an efficiency of 0.85. Modified IEEE 33-bus distribution network. Basic parameters of 5G communication base stations.

What is the energy consumption of 5G communication base stations?

Overall, 5G communication base stations' energy consumption comprises static and dynamic power consumption. Among them, static power consumption pertains to the reduction in energy required in 5G communication base stations that remains constant regardless of service load or output transmission power.

What is a Grid Transformation Plan?

The Grid Transformation Plan consists of projects that work together to improve grid reliability and security. Many of these projects involve work at electric substations. Voltage islands are single-transformer substations which serve customers and don't have available backup transformers to pick up the electric load in the event of a failure.
