

Canadian Grid Energy Storage

What is Canadian energy storage?

The blueprint for Canadian energy storage. Located in Haldimand County, Ontario, Oneida Energy Storage is a fully operational, 250 MW/1,000 MWh lithium-ion battery energy storage facility. It represents Canada's largest operational energy storage facility, and is amongst the largest energy storage projects globally.

Does Canada have a battery storage system?

Canada leads in battery storage systems, allowing excess electricity from renewable sources to be saved for later use. Imagine a bright summer day when solar panels capture more energy than needed. This excess power isn't wasted--it's stored in batteries for use during cloudy winter days.

Who is involved in the Canadian power grid project?

Information will be shared with grid operators, technology developers, energy system modellers, utilities, and other key stakeholders in the Canadian electricity sector to provide data and guidance on pathways to a clean, reliable and cost-effective power grid for Canadians. To learn more about this project, email our Business Office.
