

# Charging power of lithium batteries in communication base stations

What is the charging method for a lithium battery?

The charging method for a lithium battery is limited voltage and constant current, which is controlled by an IC chip.

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO<sub>4</sub>) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. Modular Design: A modular structure simplifies installation, maintenance, and scalability.

What makes a good battery management system?

A well-designed BMS should include: Voltage Monitoring: Real-time monitoring of each cell's voltage to prevent overcharging or over-discharging. Temperature Management: Built-in temperature sensors to monitor the battery pack's temperature, preventing overheating or operation in extreme cold.

Charge and discharge rate: According to the power requirements of the base station's electrical equipment, select a lithium battery pack with an appropriate charge and discharge rate.
