Will the 5G mobile communication infrastructure contribute to the smart grid?

In the future, it can be envisioned that the ubiquitously deployed base stations of the 5G wireless mobile communication infrastructure will actively participate in the context of the smart grid as a new type of power demand that can be supplied by the use of distributed renewable generation.

How will a 5G base station affect energy costs?

According to the mobile telephone network (MTN), which is a multinational mobile telecommunications company, report (Walker, 2020), the dense layer of small cell and more antennas requirements will cause energy costs to grow because of up to twice or more power consumption of a 5G base station than the power of a 4G base station.

What technologies are used in 5G networks?

Emerging mobile network and computing technologies The massive MIMO, mm-Wave, and UDN are considered promising technologies in 5G networks. These technologies may be used parallel to obtain the full benefits of directional beam-widths, large capacity, and broad coverage.

How is RE technology a viable solution for 5G mobile networks?

1. RE generation sources are a practical solution for 5G mobile networks. For SCNs, the RE technology is a viable and sustainable energy solution. RE technology can produce enough renewable energy to power SCBSs. It is predicted that 20% of carbon dioxide emissions will be reduced in the ICT industry by deploying RE techniques to SCNs.

How does 5G work?

In 5G, BSs will operate in a cloud radio access network (C-RAN) or/and mmWave network. In C-RAN, users are connected to remote radio units (RRUs), and multiple RRUs are linked to the centralized base band units (BBUs), which operate at much higher power and process the data of these RRUs.

What are the advantages of RE in 5G mobile networks?

There are several potential advantages of RE in 5G mobile networks. First, for the network operator, RE can reduce the cost of energy consumption by deploying solar or wind energy base stations. RE enabled BSs can use solar energy for operation in the daytime, along with storing it in rechargeable batteries.
