Which inverter is best?

1. Grid-Tied Inverters: Work best when connected to the utility grid, allowing you to sell excess power back to the grid. 2. Off-Grid Inverters: Essential for remote locations with no grid access, requiring battery storage. 3. Hybrid Inverters: Offer flexibility by allowing both grid connection and battery storage.

How does a grid tie inverter work?

A MPU in the grid tie inverter can sense the AC waveform of the power grid and generate voltage back to the power grid based on the waveform. However, the electricity returned to the grid needs to have a proportion of reactive power to keep the nearby grid within allowable limits.
