

The identification, adoption and utilisation of reliable interconnection technology to assembly crystalline silicon solar cells in photovoltaic (PV) module are critical to ensure that ...

SummaryOverviewPropertiesCell technologiesMono-siliconPolycrystalline siliconNot classified as Crystalline siliconTransformation of amorphous into crystalline siliconThe allotropic forms of silicon range from a single crystalline structure to a completely unordered amorphous structure with several intermediate varieties. In addition, each of these different forms can possess several names and even more abbreviations, and often cause confusion to non-experts, especially as some materials and their application as a PV technology are of minor significance...
