

Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.

What are the prospects of solar power production from photovoltaic power plants?

Solar power production from photovoltaic power plants (PVPP) has great prospects. The constantly decreasing costs of photovoltaic technology makes solar power fully competitive with electricity supplied from the grid. Solar power is one of the inexhaustible energy sources.
