How do emergency communications work?

Emergency communications are not a just function of technology and access alone. Information flows in cascades and chains, between the point of origin and ultimate use. Such cascades often involve multiple actors and points where information is interpreted, reformulated, and transmitted to the next set of actors.

When should a transmitting station request a repeating message?

Before receipting a message that is unclear, stations should request repetitions. For this purpose, the proword SAY AGAIN may be used alone or in conjunction with prowords that identify the portion of the message that is unclear. In complying with requests for repetitions, the transmitting station must identify the portion that is being repeated.
