

Distribution of PV sites in Argentina

What are the largest solar PV power plants in Argentina?

Listed below are the five largest upcoming Solar PV power plants by capacity in Argentina, according to GlobalData's power plants database. GlobalData uses proprietary data and analytics to provide a complete picture of the global Solar PV power segment. Buy the latest solar PV plant profiles here. 1. Hive San Luis Solar PV Park

Is solar photovoltaic the future of electricity generation in Argentina?

However, despite significant natural potential, solar photovoltaic still represents only a small share of Argentina's total electricity generation. Although this picture may look bleak, a wide range of market segments relating to decentralised photovoltaic generation in Argentina have developed.

Is there a gap between photovoltaic installations in Argentina?

This gap is, however, not static: different legal frameworks and governmental promotion programs have led to the deployment of large-scale and distributed off-grid photovoltaic installations, but they are at a volume (in terms of installed capacity) that lags years behind other countries with which Argentina shares relevant characteristics.

How can a PV project be implemented in Argentina?

In Argentina, a wide range of academic options are available to qualify a workforce for implementing PV projects. State universities, where high quality education is free, play a major role. The pre-existing infrastructure of INET made it possible to establish a broad selection of technical training courses in a short period of time.

Why do Argentinian people not know about PV systems?

Due to their low diffusion rate in Argentina, PV systems are not yet part of the population's everyday reality and, in this context, many of the interview participants remarked that there is generally a lack of knowledge regarding the application and potential of PV systems among the Argentinian population. 6. Discussion

Can PV energy be fed into the grid in Argentina?

In comparison to the global situation, the possibility to feed excess energy generated from PV systems into the grid in Argentina was only approved at national level relatively recently. Consequently, participants in this study rated interactions with distribution network operators as important.
