

Does the battery cabinet communication power supply need to be discharged

A low voltage fuse is kind of impossible - you don't have the energy to break the connection. You could do a "circuit breaker" with a transistor, which would do what you say, but that wastes ...

I only discharged my (old) UPS once battery once or twice and it was during actual power outages. It lasted the three years it was meant to last. Lead-acid batteries don't suffer memory ...

Does the battery cabinet communication power supply need to be discharged
