

How big is the battery storage capacity in Europe?

the operating battery storage capacity reached 49.1 GWh at the end of 2024. Over the past 4 years, the enlargement of Europe's BESS fleet has intensified, achieving a CAGR of nearly 100%, whereas from 2018-2021, the average annual increase remained below 50%. Thanks to this upswing during the last 4 years, the battery storage capacity in Europe is

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

What is the European battery storage market outlook?

According to the "European Market Outlook for Battery Storage 2024-2028" by SolarPower Europe, the European battery storage market is expected to grow to a total installed capacity of up to 135 GWh in four years, and to 78 GWh in a medium scenario. The latter corresponds to an annual market growth of 30-40%.

How can European policymakers help the battery storage sector?

Recommendations How can European policymakers help the battery storage sector? Battery storage systems are essential for strengthening the EU's energy security and competitiveness by enhancing flexibility, providing ancillary services to secure the grid, maximising the use of renewable energy, and effectively dealing with energy price

Are battery storage systems booming in Europe?

Not only in Germany, but throughout Europe, battery storage systems are booming as a result of the energy transition. According to SolarPower Europe, battery storage systems with a capacity of 17.2 GWh were installed in 2023, almost twice as much as in the previous year. The total installed capacity in Europe was 35.8 GWh.

How does solar power affect battery storage in the EU?

Years of strong solar growth and high gas prices have increased electricity price volatility across the EU, strengthening opportunities for battery storage. In turn, batteries can increase power demand at peak solar times, supporting solar revenues.

The large-scale battery segment is growing rapidly, and for the first time, is set to represent most of battery installations on the continent this year. Historically, home batteries ...

Our five-year outlook foresees significant BESS expansion in Europe - a sixfold increase to nearly 120 GWh by 2029, driving total capacity to 400 GWh, yet falls short of energy transition needs.
