

Frequency modulation function energy storage system

What is dynamic frequency modulation model?

The dynamic frequency modulation model of the whole regional power grid is composed of thermal power units, energy storage systems, nonlinear frequency difference signal decomposition, fire-storage cooperative fuzzy control power distribution, energy storage system output control and other components. Fig. 1.

Can battery energy storage improve frequency modulation of thermal power units?

Li Cuiping et al. used a battery energy storage system to assist in the frequency modulation of thermal power units, significantly improving the frequency modulation effect, smoothing the unit output power and reducing unit wear.

What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.

What is the time scale of frequency modulation?

In the frequency modulation process of power system, the time scale of a frequency modulation adjustment is second level and below, the frequency fluctuation of the period below 10 s is mainly suppressed by the governor and the inertia of the system, and the time constant of the filter should be ≤ 10 s.

How a thermal power unit coupling energy storage system works?

In this strategy, part of the power commands are assigned to the energy storage system through fuzzy control, so as to establish the primary frequency modulation scheduling module of the thermal power unit coupling energy storage system, which can ensure the power generation revenue of thermal power units.

Can MATLAB/Simulink verify a thermal power unit primary frequency modulation model?

Model verification A previous article based on theoretical research built a hybrid energy storage system-assisted thermal power unit primary frequency modulation model in MATLAB/Simulink. The rated power of the thermal power unit is 600 MW, and the relevant parameters are per unit value.

The large-scale grid connection of new energy has an increasingly serious impact on frequency fluctuation. In order to improve the frequency regulation ability of thermal power units, battery ...
