

How high is the voltage of the 15kv inverter

The input voltage is 3.7V, that is 18650 battery voltage. If you want to increase the input voltage (increase to 12V), you need to increase the resistance value of feedback resistor, or the triode ...

Here is a schematic of the "15kV generator" kit with more details. Initially, the transistor gets base-current through the feedback winding and turns on. Flux in the core ...
