

# How many watts are suitable for photovoltaic inverters

What size solar inverter do I Need?

Inverter size is measured in kilowatts (kW). It should match your solar array within a 1.15 to 1.33 ratio. Getting it wrong can reduce efficiency or disqualify you from solar rebates. What size inverter do I need for solar panels? To calculate, divide your solar panel system's total DC rating by the desired inverter's AC output.

How do you calculate wattage for a solar inverter?

Calculate Solar Panel Output Determine how many watts and the number of solar panels you will be installing. For example, assume you have eight 350W panels, then your total wattage would be  $(8 \times 350W = 2800W)$  or 2.8kW. This number will become important in the inverter sizing equation.

Do you need a solar inverter?

The inverter is one of the most important components of a home or portable solar power system. Solar panels produce DC electricity, but you need an inverter to convert DC power into 120/220 volt AC electricity. Only after conversion can home appliances and other devices use it.

What voltage do I need for a portable solar panel?

For portable solar panels in the 100 watt range, 12V, 24V or 48V will be fine. If you have a more powerful inverter, higher voltage is required. This information will be provided in the inverter, and this will prove useful if you want to connect it direct to a solar panel.

How do I choose a solar inverter?

This is the most critical factor in solar inverter sizing. Check the total wattage of your solar array (DC) and use it to calculate the appropriate inverter output (AC). For optimal results, a 6.6kW array typically pairs with a 5kW inverter, falling within the accepted array-to-inverter ratio of 1.15 to 1.33.

What is a recommended inverter power range?

By inputting your panel's rated power and number of panels, the calculator produces a recommended inverter power range that aligns with 80-100% of your system's total DC capacity. This approach ensures that your inverter is neither under-sized--risking energy losses and performance issues--nor over-sized, which can lead to unnecessary costs.
