

# How much does large-scale energy storage power supply cost in the EU

How much energy storage will Europe have in 2024?

In addition, there are ambitious national expansion targets for energy storage - 24 GW by 2030. For 2024, SolarPower Europe expects an increase of 3.7 GWh in grid storage (82% of the British battery storage market), and 4.7 GWh annually by 2028 (65% of the British battery storage market).

How much does battery storage cost in Europe?

The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range from EUR250 to EUR400 per kWh, with a clear downward trajectory expected in the coming years.

How can European policymakers help the battery storage sector?

Recommendations How can European policymakers help the battery storage sector Battery storage systems are essential for strengthening the EU's energy security and competitiveness by enhancing flexibility, providing ancillary services to secure the grid, maximising the use of renewable energy, and effectively dealing with energy price volatility.

Are battery storage systems booming in Europe?

Not only in Germany, but throughout Europe, battery storage systems are booming as a result of the energy transition. According to SolarPower Europe, battery storage systems with a capacity of 17.2 GWh were installed in 2023, almost twice as much as in the previous year. The total installed capacity in Europe was 35.8 GWh.

What is the European battery storage market outlook?

According to the "European Market Outlook for Battery Storage 2024-2028" by SolarPower Europe, the European battery storage market is expected to grow to a total installed capacity of up to 135 GWh in four years, and to 78 GWh in a medium scenario. The latter corresponds to an annual market growth of 30-40%.

How big is the battery storage capacity in Europe?

The operating battery storage capacity reached 49.1 GWh at the end of 2024. Over the past 4 years, the enlargement of Europe's BESS fleet has intensified, achieving a CAGR of nearly 100%, whereas from 2018-2021, the average annual increase remained below 50%. Thanks to this upswing during the last 4 years, the battery storage capacity in Europe is

**Energy storage for electricity generation** An energy storage system (ESS) for electricity generation uses electricity (or some other energy source, such as solar-thermal energy) to charge an ...
