

# How much electricity does a rooftop 5G base station use per year

How much power does a 5G base station use?

"A 5G base station is generally expected to consume roughly three times as much power as a 4G base station. And more 5G base stations are needed to cover the same area," -IEEE Spectrum, 5G's Waveform Is a Battery Vampire

Are 5G base stations causing more energy consumption?

However, Li says 5G base stations are carrying five times the traffic as when equipped with only 4G, pushing up power consumption. The carrier is seeking subsidies from the Chinese government to help with the increased energy usage.

Is 5G more energy efficient than 4G?

Although the absolute value of the power consumption of 5G base stations is increasing, their energy efficiency ratio is much lower than that of 4G stations. In other words, with the same power consumption, the network capacity of 5G will be as dozens of times larger than 4G, so the power consumption per bit is sharply reduced.

Why does 5G use so much power?

The main factor behind this increase in 5G power consumption is the high power usage of the active antenna unit (AAU). Under a full workload, a single station uses nearly 3700W. This necessitates a number of updates to existing networks, such as more powerful supplies and increased performance output from supporting facilities.

How much power does a 5G network consume?

In China, for example, total power consumption by telecoms networks exceeds 50 billion kWh. Once 5G networks are deployed, the power consumption of telecoms networks in China will exceed an estimated 100 billion kWh, generating annual carbon emissions of 27.2 billion kg."

How many cabinets does a 5G power system support?

It supports a 24 kW rectifier, 600 Ah lithium battery, and 3.5 kW cooling system in a single cabinet. 5G Power meets power supply and backup demands for co-deployed 2G/3G/4G and 5G hardware using a One Cabinet for One Site solution. Traditional solutions, on the other hand, require more cabinets.
