

How to find the local communication base station inverter

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.

How do I Configure my inverter communication?

To configure your inverter communication: Log into mySolarEdge - contact your installer if you still need a Username/Password to access the Monitoring Platform. Tap "Inverter Communication" in the menu. Follow the app's instructions to connect to the inverter's WiFi (if you are not already connected).

When do I need to reconfigure my inverter communication?

You may need to reconfigure your inverter communication in certain cases, such as when your Wi-Fi network or password has changed. To configure your inverter communication: Log into mySolarEdge - contact your installer if you still need a Username/Password to access the Monitoring Platform. Tap "Inverter Communication" in the menu.

How does a low voltage inverter work?

The data signal is connected to the low-voltage busbar through the power line on the AC side of the inverter, the signal is analyzed by the inverter supporting the data collector, and the communication is finally connected to the local power station management system or the cloud platform through the LAN or the Internet 2. Application scenario 4.

How do I connect my inverter to my Wi-Fi network?

To connect to your Wi-Fi network, click "configure". Select your preferred wireless network and insert a password, then click "join." You will now be connected to your Wi-Fi network. To confirm the connection is successful, click on "inverter communication" in the menu. Connect to the inverter and verify the status as S_OK.

How do I connect my GivEnergy inverter to a VPN?

The matter was resolved by going to VPN settings, selecting 'split tunneling' and isolating the GivEnergy app. Go to the app. Select the three bars at the top left. Select Local Monitoring. Select 'Scan for your inverter'. Be patient but you should see an IP address appear below which should set up connectivity.
