

India's use of bifacial solar panels

Are bifacial solar panels a key component of India's solar strategy?

Today, bifacial panels are increasingly seen as a key component of India's solar strategy, promising to improve the efficiency of solar power generation further as the country works toward its 2030 renewable energy goals.

What is a Bifacial Solar Panel and How is it Different from The Monofacial Solar Panel?

Are bifacial solar panels a good investment?

A bifacial solar panel has an efficiency of up to 22%. For some advanced models like the PERC half-cut modules, the bifacial solar panels efficiency rate shoots up to 22.5%. Since these panels have a much higher efficiency than monofacial panels, they are a great investment for residential installations.

What is bifacial solar panel price in India?

One of the most popular types of bifacial solar panels is the MonoPERC half-cut bifacial module. And, the bifacial solar panel price in India for a MonoPERC technology half-cut module is ~ Rs. 24 per watt. Want to learn more interesting details about bifacial solar panels in India? This blog is a goldmine of answers for you.

How bifacial solar panels work?

As the name indicates, bifacial solar panels can capture sunlight from both front and rear surfaces. This dual operation drastically increases their efficiency rate compared with modules like monocrystalline and polycrystalline, which can collect sunlight only from the front.

Where can bifacial solar panels be used?

Bifacial solar panels are especially useful in locations where sunlight is abundant and can be reflected off surfaces such as snow or water, or where there is a lot of diffuse light, such as on cloudy days or in areas with high albedo (reflective surfaces).

What are the different types of bifacial solar panels?

There are two main types of bifacial solar panels: glass-glass and glass-back sheets. Glass-glass bifacial solar panels have a layer of glass on both sides of the panel, which protects the bifacial solar cell and enhances its durability. These panels can be frameless and have a higher efficiency rate than glass-back sheet panels.

The Bifacial Mono PERC Double Glass Module is not just a technological upgrade; it is the future of solar energy in India. With higher efficiency, durability, and long-term benefits, ...
