OverviewInput and outputBatteriesApplicationsCircuit descriptionSizeHistorySee alsoA power inverter, inverter, or invertor is a power electronic device or circuitry that changes direct current (DC) to alternating current (AC). The resulting AC frequency obtained depends on the particular device employed. Inverters do the opposite of rectifiers which were originally large electromechanical devices converting AC to DC.

It describes the output voltage of an inverter, which converts direct current (DC) from sources like batteries or solar panels into alternating current (AC). The output voltage of an inverter is ...

The inverter output current is in phase with the voltage (unity power factor) and the total harmonic distortion (THD) is less than 5% at rated operation, which is far better than the current THD of ...
