

# Is outdoor power supply necessary in Burkina Faso

Did Burkina Faso import electricity?

Burkina Faso did not import electricity. Power generation, which includes electricity and heat, is one of the largest sources of CO2 emissions globally, primarily from the burning of fossil fuels like coal and natural gas in thermal power plants.

Is biomass a source of electricity in Burkina Faso?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Burkina Faso: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Does Burkina Faso have an electricity market in 2022?

No data for Burkina Faso for 2022. Unlike other energy commodities such as coal, oil and natural gas, electricity trade between countries is relatively limited as it is more technically complex and requires a direct cross-border interconnection.

What percentage of Burkina Faso's population has no electricity?

In the Afrobarometer 2019 survey, it was reported that in Burkina Faso, 81% of the population had no access to electricity, while 5% had intermittent access - the lowest recorded percentage among the 13 African countries included in the survey. Two main observations are in order.

How has Burkina Faso changed over the years?

Burkina Faso has made remarkable progress in recent years, with an increase in installed capacity from 324.6 megawatts (MW) in 2017 to 410 megawatts in 2019. The share of renewable energy also surged from 9.4% in 2015 to 18.36% in 2019.
