What is a lithium battery module?

A lithium battery module is composed of several to hundreds of battery cells connected in parallel and series. In addition to the structural design, when combined with a battery management system and thermal runaway control management system, it forms a relatively complete lithium battery pack system.

What is the difference between battery pack and battery module?

There are also significant differences in cost structure. In the total battery pack cost, battery cells account for the largest portion at around 50%, with cathode materials being the main cost component of the battery cells. At the battery module level, costs increase due to structural components and connectors.

What is a battery pack & how does it work?

Essentially, it's a set of lithium-ion cells working together to provide a stable power source. Each cell is like a tiny powerhouse, storing and releasing energy as needed. When combined, these cells form a battery pack that can power anything from a small gadget to a large electric vehicle.

What makes a battery pack unique?

All these design elements lay the foundation for system integration at the battery pack level. Battery packs not only contain multiple battery modules but also integrate complete BMS and thermal management systems. Thus, their most distinctive feature is system completeness and comprehensive functionality.

How much voltage does a Li-ion battery pack have?

In Li-ion batteries, the voltage per cell usually ranges from 3.6V to 3.7V. By connecting cells in series, you can increase the overall voltage of the battery pack to meet specific needs. For example, a battery pack with four cells in series would have a nominal voltage of around 14.8V.

What are the advantages and disadvantages of lithium ion batteries?

One of the key advantages of this chemistry is its efficiency. Li-ion batteries can store a lot of energy and release it quickly when needed. They also have a lower self-discharge rate compared to other battery types, meaning they hold their charge longer when not in use.

Battery Packs are the final, fully integrated power systems made by connecting multiple battery modules. A battery pack is designed to provide high energy output and is used in devices and ...
