

Photovoltaic Curtain Wall generates energy in the building implementing solar control by filtering effect, avoiding infrared and UV irradiation to the interior.

Curtain walling refers to a non-structural cladding system made from fabricated aluminum, commonly used on the outer walls of tall multi-storey buildings. This lightweight material offers ease of installation and can be customized to be glazed, opaque, or equipped with infill panels.

Thermal insulation properties of mineral wool IZOTERM are caused by the content in it of a large number of air pores and channels up to 96% of the total volume of cotton wool, in which the thermal conductivity of air in a stationary state is very low.
