What is liquid cooling?

Within the data centre sector, liquid cooling refers to removing heat from data centre components using a liquid coolant instead of air. As the industry confronts sustainability challenges, liquid cooling has been posited as a solution that can result in lower carbon emissions for organisations.

Are liquidcool servers a good choice for a data center?

From the vendor: "Designed for conventional and modular data center use, LiquidCool servers integrate easily into existing compute environments and offer maximum scalability. One liquid cooled rack can replaced four air cooled racks within a data center, saving energy and space and eliminating capital and maintenance costs.

Why is liquid cooling so popular in data centers?

Liquid cooling is becoming increasingly popular in data centers due to the need to reduce energy use. Data center operators are using techniques like LEED v4, Arc, EDGE, and liquid cooling technology to keep an eye on energy consumption.

Is liquid immersion a viable solution for a data centre?

Headquarters: US When a major Texas university installed Green Revolution Cooling's (GRC) first commercial system in 2010, many considered liquid immersion too exotic for mainstream adoption. Thirteen years later, though, GRC's ICeraQ and ICEtank technologies have established immersion cooling as a practical solution for conventional data centres.

Who is CoolIt systems?

CoolIT Systems (CoolIT) started out by designing and distributing direct liquid cooling products for the desktop gaming industry. Its presence in the industry grew alongside rising demands for direct liquid cooling for data centres.

Is liquid cooling a sustainable alternative to conventional air conditioning?

In the past, cooling has been done using conventional air conditioning systems. Recently, however, liquid cooling technologies have started to emerge as more sustainable alternatives.
