Are lithium-ion battery energy storage systems effective?

As increasement of the clean energy capacity, lithium-ion battery energy storage systems (BESS) play a crucial role in addressing the volatility of renewable energy sources. However, the efficient operation of these systems relies on optimized system topology, effective power allocation strategies, and accurate state of charge (SOC) estimation.

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

Can large-scale battery energy storage systems participate in system frequency regulation?

In the end, a control framework for large-scale battery energy storage systems jointly with thermal power units to participate in system frequency regulation is constructed, and the proposed frequency regulation strategy is studied and analyzed in the EPRI-36 node model.

Why are lithium-ion batteries used in frequency regulation?

Lithium-ion is the dominant storage technology because of its moderate cost, high efficiency, and long lifetime. These characteristics make lithium-ion batteries well suited for the frequency regulation market. 22 Argyrou MC, Christodoulides P, Kalogirou SA (2018).

Does battery energy storage participate in system frequency regulation?

Since the battery energy storage does not participate in the system frequency regulation directly, the task of frequency regulation of conventional thermal power units is aggravated, which weakens the ability of system frequency regulation.

What is the application of energy storage in power grid frequency regulation services?

The application of energy storage in power grid frequency regulation services is close to commercial operation. In recent years, electrochemical energy storage has developed quickly and its scale has grown rapidly. Battery energy storage is widely used in power generation, transmission, distribution and utilization of power system.
