

Low-altitude base station energy management system planning

What is a low-altitude network base station planning model?

To address these challenges, we propose a novel low-altitude network base station planning model based on the Proximal Policy Optimization (PPO) algorithm. Our approach involves calculating the low-altitude coverage capabilities of different base station types using ray tracing techniques.

Are Aerial Base stations a viable solution to a high traffic network?

Aerial base stations (ABSs) have emerged as a promising solution meet the high traffic demands of future wireless networks. Nevertheless, their practical implementation requires efficient utilization of limited payload and onboard energy.

What is a low altitude flight control system?

Low-Altitude Flight Control System: The system connects directly to aircraft and focuses on real-time control and command during flight. The core functions of the system include monitoring flight status, issuing early warnings, and delivering dynamic adjustment commands to ensure safe operations.

How can a low-altitude transportation system be a sustainable CPS?

Integrating advanced technologies such as artificial intelligence (AI), cloud computing, the Internet of Things, and 6G networks with low-altitude transportation systems can create highly intelligent, autonomous, interconnected, and sustainable CPS, such as LAIT [32,33].

What is a low-altitude flight service system?

Moreover, violations are made public to deter others and uphold the integrity of low-altitude airspace. Low-Altitude Flight Service System: The system is designed for enterprise users to meet the diverse needs of low-altitude flight operations.

What is low-altitude supervision system?

Low-Altitude Supervision System: The system links military and civil aviation regulatory agencies with government management platforms, which focus on airspace policy formulation, regulatory enforcement, and compliance oversight.

<p>Low-Altitude Intelligent Network (LAIN), as a new type of intelligent network, relies on space-air-ground-sea facilities to constitute a digital intelligent network system. It is a key component ...
