

Mobile power box 400hz

What is abico 400Hz powerpack?

NGA Ready: New Generation Aircraft (A380, B787, A350) DABICO 400Hz PowerPack is a modern and efficient offering from DABICO which provides a compact solution to power a parked aircraft in any possible stand configuration: under the Passenger Boarding Bridge (PBB), fixed ground mounted, towed mobile or self driven mobile.

What is a 400Hz load bank?

These load banks are essential for testing 400Hz systems as they assimilate actual aircraft loads and help to maintain equipment reliability. The load banks are available in rugged, portable designs. They are self-contained, air cooled and have a fully controllable load.

What is a 400 Hz frequency converter?

This 400 Hz frequency converter features a wealth of technical advantages, from the unique output voltage at the aircraft plug and the common ITW GSE user interface, to software update via USB and the standard overload capabilities that match all aircraft types. The ITW GSE 2400 Compact GPU offers outstanding features such as:

What is a fixed 400 Hz connection?

Fixed 400 Hz installations often include a mix of long symmetrical and asymmetrical output cables, as well as various connection boxes, making it difficult to maintain the required voltage quality at the aircraft connector. This is exactly where ITW GSE's Plug & Play voltage compensation system makes a difference.

What is a 400Hz pop-up & hatch pit system?

Series Hatch or Pop-up - In-ground 400Hz Pop-up & Hatch pit systems serve as user friendly storage device for 400Hz jet cable and plug (up to 4) and other facilities, such as 50/60Hz outlets. Located very close to the aircraft 400Hz receptacles they are the optimum solution for shortening the APU use at the parking position.

What is a series MC - 400Hz modular coiler?

Series MC - 400Hz modular coilers are motorised reeling systems fixed either under the PBB or on the ground. They ensure a fast and ergonomics reeling and storage of the 400Hz aircraft cable and plug resulting in a longer life cycle of them.

With hangar and ramp space at a premium, the compact design of the PV90-4 requires a very small footprint to deliver its high-performance output. The high efficiency, unity power factor, ...
