

Is the Netherlands a good market for battery storage?

The Netherlands is an emerging market for battery storage but, due to the lack of saturation, also a highly exploitable one. In early 2025, inspired, together with Flexcity and S4 Energy, reached an exciting milestone by taking the country's first 4-hour BESS live in a cross-market optimization setup.

Is there a roadmap for energy storage in the Netherlands?

In the Netherlands, there has also historically not been a roadmap or detailed industrial strategy with supportive legislation, policy, taxation reliefs, or investment incentives for the energy storage market.

What are the laws & regulations on energy storage in the Netherlands?

No specific laws & regulations: In the Netherlands, energy storage is not described in Dutch laws and regulations as a specific item. Standard requirements: It has to meet standard requirements for production and consumption and some specific technologies that are part of the energy storage system must comply with standardisation.

How much energy storage does the Netherlands need?

To achieve its renewable energy targets, reports in 2021 indicate that the Netherlands will need to install between 29 and 54 gigawatts (GW) of energy storage capacity by 2050. Storage with efficient management systems and digital controls is a crucial element of a reliable, flexible and affordable energy system.

Are batteries a sustainable solution to future-proof the Netherlands' electricity system?

Batteries, both BTM and grid-scale FTM (front-of-the-meter), play an important role in mitigating such challenges and offer a sustainable solution to future-proof the Netherlands' electricity system. But how can it integrate more batteries if the grid struggles to handle the current load?
