

Prices of inverters in the UK

How much does a solar inverter cost?

Note: These prices are just estimates and vary on factors such as the brand, features, and installation requirements. But for the Micro solar inverter, a unit typically costs around £90 - £100. Meanwhile, for a 3.5 kW solar panel system comprising 10 panels, you will need to spend either £890 or £1,510 for 10 microinverters.

How much does a microinverter cost?

Microinverters can cost from £20 to £100 a unit. It can cost around £2,500 for the average solar panel system comprising 14 panels, including installation costs like wiring. You'll face greater upfront costs when creating a system that uses microinverters, and the bill can be quite high if you're planning on a large installation.

What are the different types of solar inverters?

Let's explore the most popular types: hybrid solar inverters, string solar inverters, and micro solar inverters. String solar inverters are the most common type of inverters used in solar power systems. They connect multiple solar panels in a series (string) and convert the combined DC electricity into AC electricity.

How much does a string inverter cost?

A string inverter can cost around £500 to £1,500 for an average home. They're a low-cost option compared to other types of inverters. However, a string inverter usually has a lifespan of around ten years, meaning you'll need to replace it at least once since solar panels can last for 25 years or more.

Are string inverters cheaper than microinverters?

String inverters are cheaper than microinverters, but the latter offers more advantages and a longer lifespan. Other factors that can impact the solar panel inverter cost include your system size, inverter efficiency, and whether it's grid-tied or off-grid. **How Much Does a Solar Panel Inverter Cost?**

Do you have to pay for a replacement solar inverter?

The cost of the inverters is usually included in any solar quote or installation package. However, certain types of solar inverters don't typically last as long as the solar panels, so at some point it's possible you'll have to pay for a replacement inverter.
