

Why should you choose Ecuador for a solar project?

Ecuador boasts ten major ports that allow you to receive equipment from any solar market worldwide if needed. The country is also gifted with a highly professional and reliable logistics and forwarding services sector. Consequently, you can quickly receive your equipment from the port and transport them to the project site in time.

What is a string inverter?

String inverters are standard centralized inverters. Usually, a majority of small solar systems use string inverters or "centralized" inverters. In a solar PV system that comes with a string inverter, all the solar panels are connected together into "strings."

How do solar inverters work?

When the solar photovoltaic (PV) systems collect the sunlight, electrons inside the solar cells are activated, which then produce direct current (DC) energy. Then circuits within the cells capture that energy for use at households and offices. This is where your business can make its mark by supplying solar inverters to users.
