Will Spain's wind power system be 100% renewable?

By then, Spain's power system is expected to operate on 100% renewable energy. The NECP 2021-2030 proposed wind capacity growth is presented in the table below. Progress and operational details Spain installed 1,720 MW of new wind power capacity in 2020.

Is wind power a good investment in Spain?

Wind power has become Spain's the number one technology (24.67%) regarding installed power capacity on the Spanish peninsula. Spain was the number seven in Europe in new investments with investment decisions in new onshore wind farms totalling 1.5 billion EUR (1.83 billion USD).

Why does Spain use wind power?

Today, wind energy accounts for over 23% of Spain's total electricity. It's not just numbers; this clean energy powers millions of homes and businesses across the country. Spain's dedication to wind power is a key part of its mission to cut down on fossil fuel use and reach carbon neutrality by 2050.

What is the share of wind energy in Spain's electricity generation mix?

The share of wind energy in the electricity generation mix amounted to around 23% in 2021. According to the Spain Wind Energy Association's (AEE) statistics in 2020, wind energy accounted for about 27,446 MW of accumulated capacity. Moreover, as of 2020, wind energy was the second-largest source in the renewable energy mix.

Are offshore wind farms a viable option in Spain?

Onshore wind farms are prevalent in areas such as Galicia, Castile, and León, where consistent wind patterns provide the necessary force to drive large wind turbines. However, Spain is also exploring the possibilities of offshore wind farms, which can capture the more powerful and stable winds over the ocean, offering even greater energy potential.

What are Spain's onshore wind farms?

Spain's onshore wind farms are widely regarded as some of the most efficient in Europe. These farms are strategically located in areas with consistent wind patterns and feature advanced turbines capable of generating large amounts of electricity with minimal environmental impact.
