

The most critical parameters for photovoltaic matching energy storage

What determines the optimal configuration capacity of photovoltaic and energy storage?

The optimal configuration capacity of photovoltaic and energy storage depends on several factors such as time-of-use electricity price, consumer demand for electricity, cost of photovoltaic and energy storage, and the local annual solar radiation.

What is the energy storage capacity of a photovoltaic system?

The photovoltaic installed capacity set in the figure is 2395kW. When the energy storage capacity is 1174kWh, the user's annual expenditure is the smallest and the economic benefit is the best. Fig. 4. The impact of energy storage capacity on annual expenditures.

What is a decision variable in a photovoltaic system?

The outer objective function is the minimum annual comprehensive cost of the user, and the decision variable is the configuration capacity of photovoltaic and energy storage; the inner objective function is the minimum daily electricity purchase cost, and the decision variable is the charging and discharging strategy of energy storage.

What determines if a PV system benefits a load?

The total excess energy after PV determines whether PV benefits the load. A load with less excess energy is considered to be suitable for PV-only system. The ratio of the excess energy is determined upon the design of PV-BESS system.

Can a photovoltaic system be integrated with a battery energy storage system?

The integration of photovoltaic (PV) system at behind the meter has gained popularity due to the growing trend toward environmentally friendly energy solutions. Coupling PV systems with battery energy storage systems (BESS) addresses the uncertainties of PV energy production while enhancing energy management.

Why is energy storage important in a photovoltaic system?

When the electricity price is relatively high and the photovoltaic output does not meet the user's load requirements, the energy storage releases the stored electricity to reduce the user's electricity purchase costs.
