

What is a 3G base station converter?

In a 3G Base Station application, two converters are used to provide the +27V distribution bus voltage during normal conditions and power outages.

What types of power systems are used in communications infrastructure equipment?

Communications infrastructure equipment employs a variety of power system components. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end.

What is a power supply system?

The power supply systems thus secure the entire transmission technology (LTE, 5G, VOIP, TV, servers, etc.) against network failures. They are precisely tailored to the requirements of the telecommunications network operators. These include:

What is a preferred power supply architecture for DSL applications?

A preferred power supply architecture for DSL applications is illustrated in Fig. 2. A push-pull converter is used to convert the 48V input voltage to $\pm 12V$ and to provide electrical isolation. Synchronous buck converters powered off of the +12V rail generate various low-voltage outputs.

How many kW does a telecom power supply have?

Telecom power supplies with rectifier (72 kW right, or 90 kW left) and inverter (7.5 kVA) in one system as well as 10" touch display of the MCU 3000 system controller built into the cabinet door.

What is a multi-output power supply design?

Multiple output designs may also employ a complex regulation scheme which senses multiple outputs to control the feedback loop. Voice-over-Internet-Protocol (VoIP), Digital Subscriber Line (DSL), and Third-generation (3G) base stations all necessitate varying degrees of complexity in power supply design.

MORNSUN has designed entire collections of power supplies and related electrical components, which are all known in the industry for their high reliability and quality. In particular, MORNSUN ...

Three-phase power supply for communication base station
