

# Tunisia Energy Storage Power Station Combination Plan

What percentage of Tunisia's electricity is renewable?

In 2022, only 3% of Tunisia's electricity is generated from renewables, including hydroelectric, solar, and wind energy. While STEG continues to resist private investment in the sector, Parliament's 2015 energy law encourages IPPs in renewable energy technologies.

Will the GOT build a power plant in Tunisia in 2024?

In 2024, the GOT is also expected to launch a tender for the construction of at least one 470-550 MW combined-cycle power plant in Skhira (south Tunisia) as an IPP. In May 2018, the Ministry of Energy and Mines published a call for private projects to build renewable power plants with a total capacity of 1,000 MW (500 MW wind and 500 MW solar).

Can Tunisia build a reliable electricity supply?

We found that Tunisia can cost-effectively build a reliable electricity supply based on local power generation, with high proportions of solar and wind power. With an onshore wind potential greater than 30 times the projected 2050 demand and a solar potential greater than 100 times that demand, Tunisia has exceptional renewable energy potential.

What is Tunisia's energy plan?

The national energy plan aims to increase this share to 35% by 2030, and at least 80% by 2050. In the medium term (by 2035), Tunisia targets to generate half of its electricity from clean energy sources, accounting for 18% of the country's primary energy mix. The plan facilitates a swift transition from fossil fuel dependency to clean energy.

How much capital does Tunisia need for energy transition?

Tunisia's energy transition plan demands significant capital mobilisation, with an estimated US\$18 billion required by 2035, which is expected to generate around 70 000 direct and indirect jobs in the energy sector.

How can Tunisia increase its energy access rate?

Tunisia must build up and expand its power generation system to increase the energy access rate to 100%. Building new power plants - no matter the technology - will require new infrastructure (including power grids), spatial planning, a stable policy framework, and access to finance.

SunContainer Innovations - Summary: Tunisia has launched its first utility-scale energy storage power station, marking a critical step in stabilizing renewable energy integration. This article ...

Tunisia's energy storage sector is transitioning from pilot projects to utility-scale deployments. With proper

# Tunisia Energy Storage Power Station Combination Plan

technology pairing and international collaboration, storage could unlock 2.6TWh of ...

Nestled in Tunisia's sun-drenched Sousse region, the Sousse Photovoltaic Energy Storage Power Station stands as a game-changer. Imagine solar panels dancing with advanced batteries - ...

What are Tunisia's energy projects? One third of the projects will be for wind farms and two thirds for solar photovoltaics. Tunisia's national grid is connected to those of Algeria and Libya which ...
