

How do solar panels work in the UK?

In the UK, panels are typically south-facing for maximum exposure. Solar energy is classified as renewable and reduces dependence on finite resources like coal and natural gas. The efficiency of solar panels, affected by factors like positioning and shading, determines the amount of energy produced.

How much does a 4KW Solar System cost in the UK?

GreenMatch's research has found the average price of a domestic 4kW solar panel system in the UK can range between £6,600 - £8,100 (including installation costs), depending on the type of panels you install, their wattage and the manufacturer.

How efficient are solar panels in the UK?

Most solar panels on domestic systems in the UK are around 15-25% efficient, although some types of solar panels for houses can reach efficiency levels above 25%. The most efficient type of solar panels are monocrystalline panels. These have efficiency ratings ranging from 20% to 25%.

How do I know if my UK Home is suitable for solar?

You can also go directly to a supplier to see whether your UK home is suitable for solar panels. For example, Octopus Energy offers a comprehensive assessment process to see if your home will work - they'll check your roof's orientation, size and shading levels.

Does Home Energy Scotland offer solar panels?

Home Energy Scotland offers grants and loans for energy-saving home improvements, including solar panels. ScottishPower also offers a Smart Export Guarantee (SEG) program where eligible customers can benefit from a variable unit rate and payments every 90 days.

How much do solar panels cost in the UK?

Although solar panels are much cheaper today than in past years, they are still a significant investment. They can cost anywhere between £3,000 and £10,000 and paying out such large sums of money may not be easy for everyone. If you find yourself in this situation you might want to consider the solar panel finance options available in the UK.
