

# Western Europe uses solar power for home use

Is Europe becoming a solar powerhouse?

Wind power also reached new highs in May and June, while the surge in solar generation helped the EU cope with soaring energy demand during early summer heatwaves. "Europe is becoming a solar powerhouse," said Ember energy analyst Chris Rosslowe.

Which EU country has the most solar power per person?

Which EU country has most solar per person? When it comes to solar power per capita, Europe's long-time solar leader, Germany, does not hold the first position. For the second year in a row, the Netherlands ranks first, reaching the remarkable milestone of more than 1,000 watt per inhabitant in 2022, 28% up from 815 W/capita in 2021.

Why is European Solar so popular?

Europe's solar success is fueled in part by strong public support for renewable energy, with nearly 90% of Europeans backing EU efforts to expand it, according to the European Commission. Rooftop solar, lower energy bills and greater independence from fossil fuel markets have resonated especially with younger, climate-conscious consumers.

How does Europe support solar power expansion?

Together with the European Data Journalism Network, DW has analyzed how Europe's governments support the continent's solar power expansion. How did solar become so popular so fast? Today, several EU countries host a capacity of around a kilowatt -- roughly two solar panels -- per person.

Which country gets the most energy from renewables in Europe?

Iceland gets the greatest share of its energy from renewable sources in Europe, thanks to its great geothermal resources. Around 86 per cent of its clean energy came from this source according to Eurostat's calculations. Norway came in second place with a stellar 76 per cent from renewables, chiefly from hydropower.

Is solar power the EU's leading source of electricity?

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals that solar accounted for 22.1% of the EU's electricity mix, surpassing nuclear and leaving fossil fuels far behind.

I believe that solar panels don't have a long-term future in the Northern European energy mix. So let's first define Northern Europe: I'll define it as the area in Europe where winter energy usage ...
