

What is needed to cool energy storage batteries

Can liquid cooling be used in battery energy storage systems?

Air cooling systems work poorly in countries like India, where summer heat often surpasses 40°C (104°F). Liquid cooling works dependably in extreme temperatures so it serves as the best storage solution for these demanding areas. Sungrow has pioneered the use of liquid cooling in battery energy storage systems with its PowerTitan line.

Why do batteries need a cooling system?

Batteries naturally generate heat during charging and discharging cycles. Without proper cooling, temperatures can rise, leading to decreased efficiency, shortened battery lifespan, and even safety risks. A well-designed cooling system ensures thermal regulation for optimal battery operation. Let's explore the two main cooling methods:

What are battery energy storage systems?

Battery energy storage systems form the fundamental structure of future energy systems based on renewable power. Deciding between liquid and air cooling serves to optimize performance and cut costs while protecting our environment.

How many kW does a battery cooling unit provide?

Each unit provides up to 12kW of cooling, and multiple units can be easily combined to support the highest cooling load requirements. Alternatively, a compact version is designed to be mounted outdoors on the cabinet door, for a small footprint that allows easy integration inside battery cabinets and enclosures.

What is an air-cooled battery system?

Air-cooled systems use ambient air flow - fans or natural convection - to carry heat away from the cells. They are simple and low-cost, since no coolant, plumbing or pumps are needed. Air cooling avoids leak hazards and extra weight of liquids. As a result, smaller or lower-power battery installations often rely on air-cooled designs.

Why is a cooling system important for a BESS battery?

Cooling systems are critically important for BESS, providing the thermal stability that is crucial for battery performance, durability, and safety. If applied correctly, the solutions will reduce battery degradation and damage, and minimize downtime.
